College Africa Group – Environmental Sustainability: A Practical Approach to Greening Your Organisation

Environmental Management Systems (EMS) involve a set of processes and practices that enable an organisation to reduce its environmental impacts and increase its operating efficiency. A well-designed EMS can help an organisation address its regulatory demands in a systematic manner thereby reducing the risk of noncompliance. An EMS can also help address non-regulated issues such as pollution prevention, odor management, water usage and energy conservation.

In this one-day course participants will learn about EMS and how it can benefit their organisation. Through the use of a Case Study and information they bring about their own company participants will leave with a draft EMS for their organisation. It will include organisational Environmental Aspect and Impacts and Objectives and Targets for their organisation's significant environmental impacts.

This one-day workshop will teach participants:

- Define what an Environmental Management System (EMS) is and the benefits of establishing one in your organisation
- Understand 'greenwashing' and ways that their organisation can avoid 'greenwashing'
- Know the six KPI areas as defined by the Eco-Management and Audit Scheme (EMAS)
- Know the steps necessary to develop an EMS
- Be able to determine the Environmental Impacts and Aspects within an organisation
- Understand and apply an Environmental Significance standard to organisational Environmental Impacts
- Set Objectives and Targets for significant organisational environmental impacts

Environmental Management

This session will show your students what an EMS involves, considers three types of EMSs, and allows them to explore why companies develop their own EMS's.

Developing an EMS

Here, your students will be led through the step-by-step process for developing an organisational EMS.

Environmental Aspects and Impacts

Students are shown in this session how to determine the environmental aspects and impacts of your organisation.

Environmental Significance

This session will allow students to use an Environmental Significance Standard to continue to explore aspects of significance from the previous session.

Objectives and Targets

This session follows up on the previous ones and leads students to determine reasonable Objectives and Targets for the aspects identified earlier.
